It's certainly a nice way to celebrate ScummVM moving to its long awaited version 1. After 15 consecutive laparoscopic gastrectomies, of which 2 were total, 4 proximal, 4 subtotal, 2 distal, and 3 laparoscopic esophagogastrectomies, no conversion to open surgery was reported, and there were no significant differences in operative time, transfusion rate, number of lymph nodes resected, median length of stay, and morbidity, although there was significantly lower blood loss among the laparoscopic group, demonstrating both the feasibility and safety of the laparoscopic approach. The more exacting the science, the more rigorous the science, the more likely that science was represented in those Bible studies.
